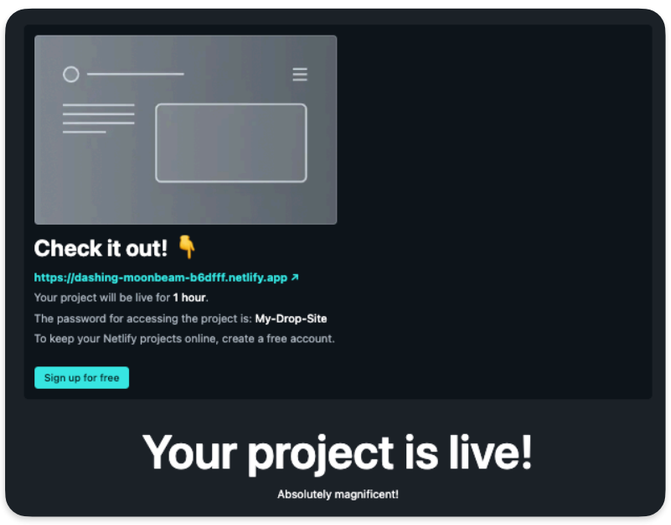
Think of **Netlify** as a free, high-speed "home" for your webpage that makes going live as simple as moving a file on your computer.

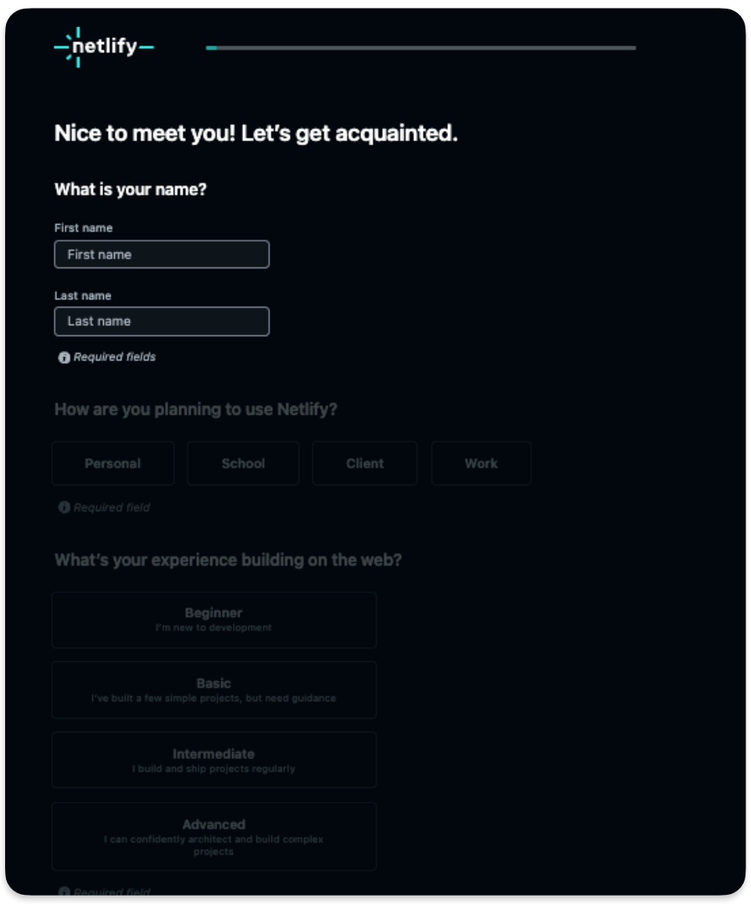
Instead of dealing with "techy" server setups or complex code, you simply drag and drop your page file into your browser, and Netlify instantly gives you a secure, professional link to share with the world.

It handles all the heavy lifting behind the scenes—ensuring your site loads lightning-fast and stays safe—so you can focus on your content rather than the plumbing of the internet.

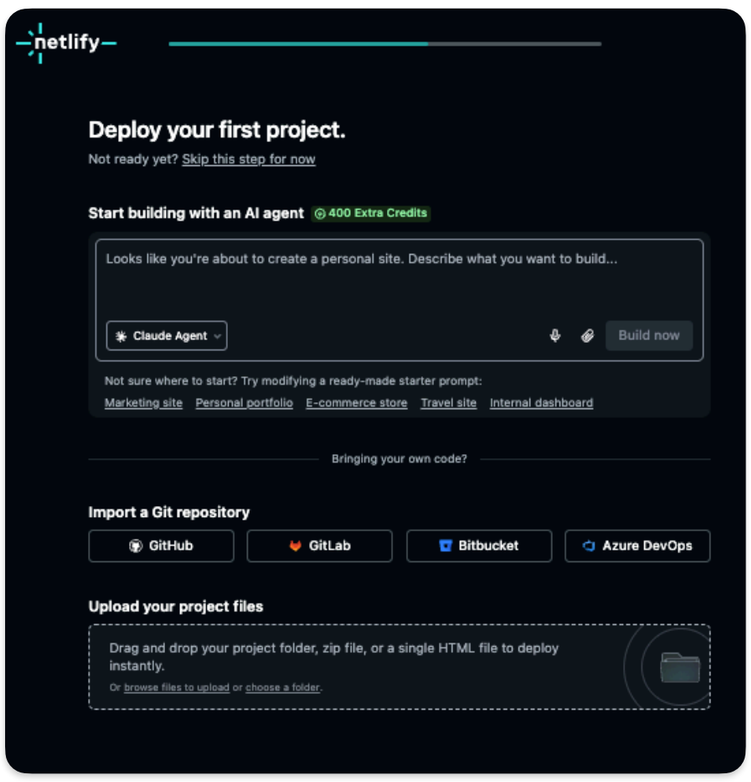
1. Click Sign up



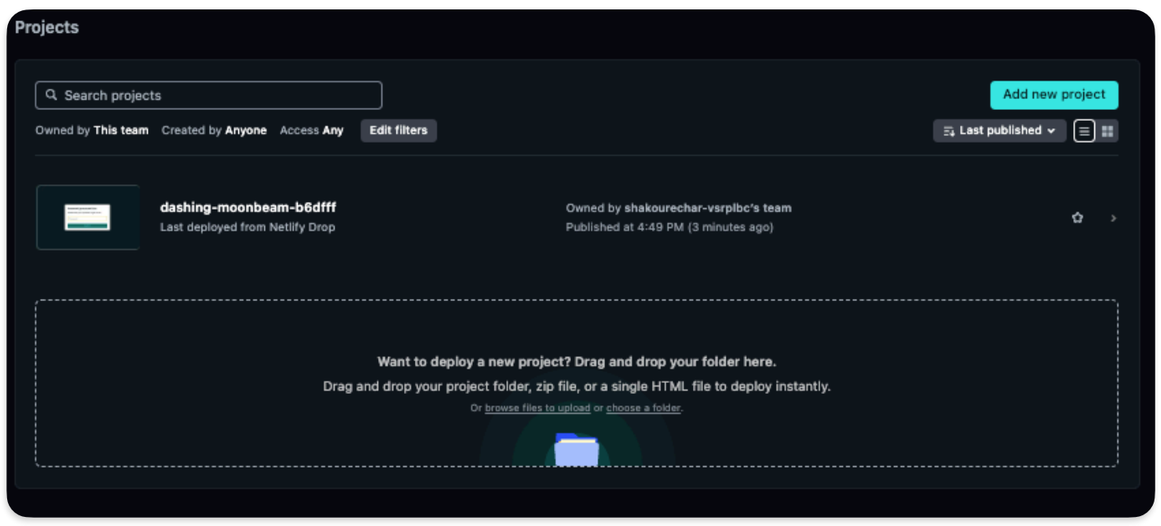
2. Fill Out Name, Usage, and Experience



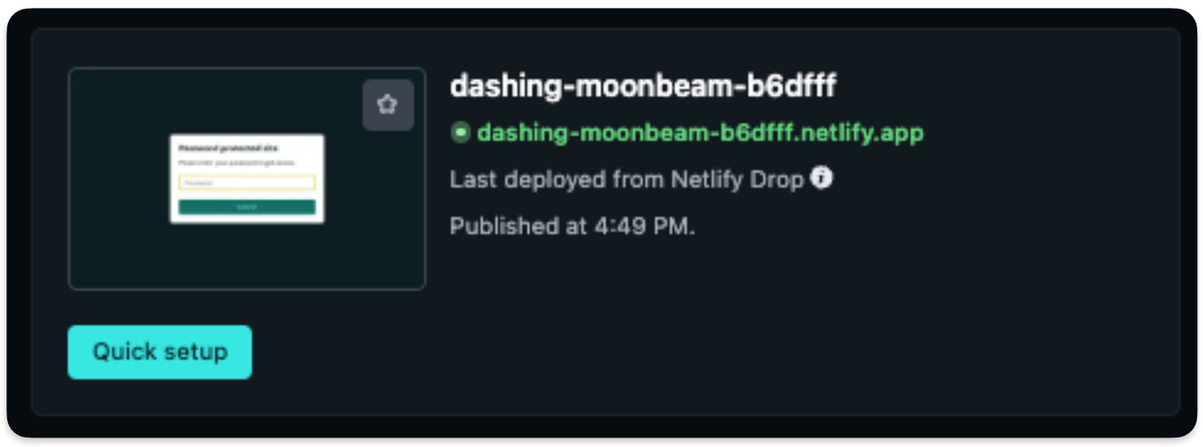
3. Click Skip this step



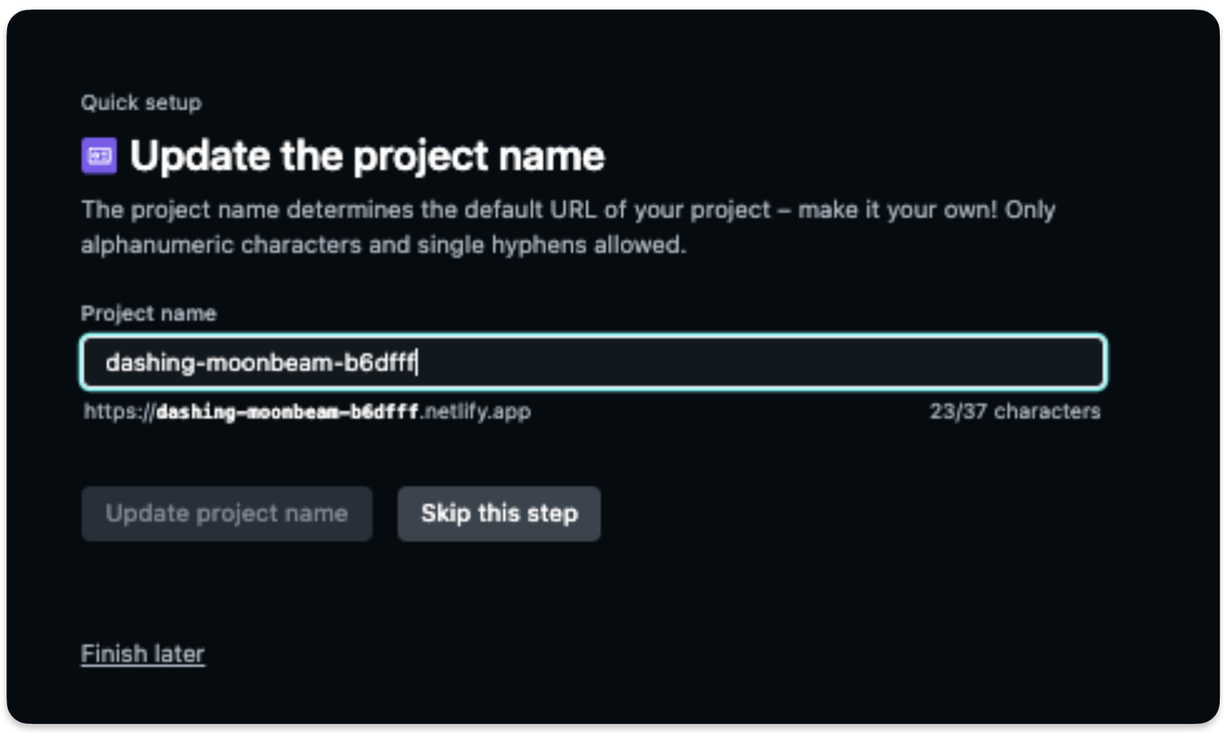
4. Click Open the project



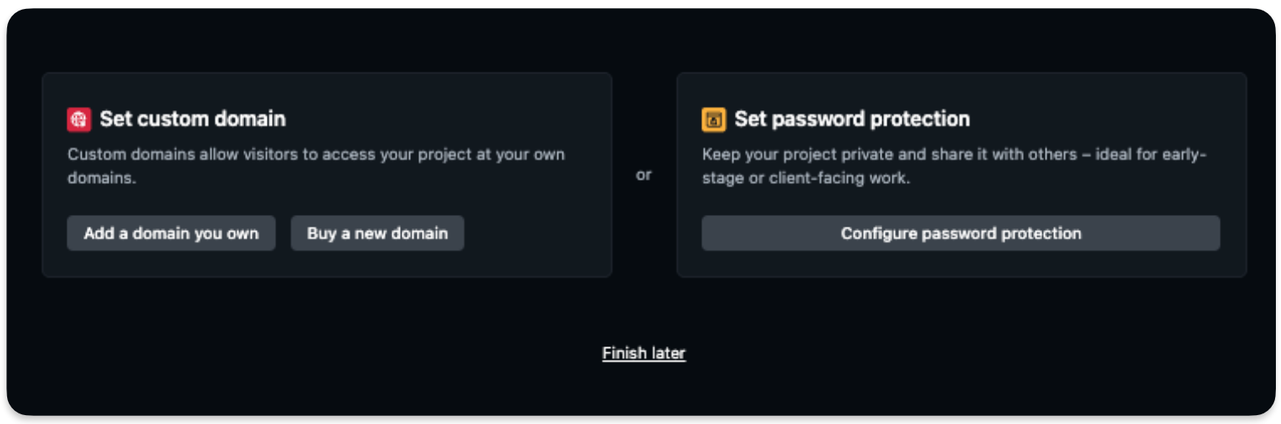
5. Click Quick Setup

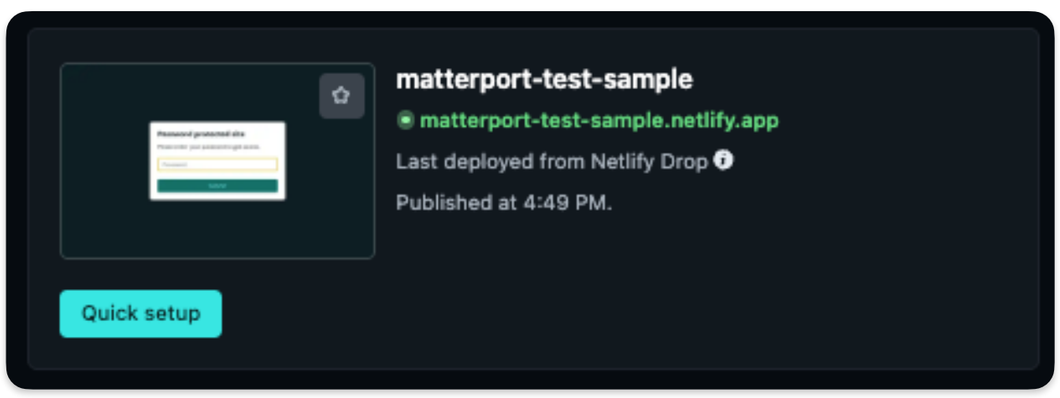


6. Rename your project



7. Click Finish later (unless setting up your own domain)





8. Right Copy link / Click link to open
